

CHEMICAL HANDLING GUIDELINES

1

Read the label directions and the Safety Data Sheet (SDS) prior to use.

2

Refer to SDS for personal protection equipment. Wash protective equipment after each use and store in a dry clean location.

3

NEVER MIX TWO CHEMICALS TOGETHER
(Serious injury or death may occur)

4

Only use chemicals that are correctly labelled. Replace damaged or defaced labels immediately.

5

If you do not understand how to use the product correctly, read the appropriate fact sheet and/or ask your supervisor. If in doubt, check it out.

NOTE: Alkaline products burn the skin. A sign of alkali on the skin is a slimy feeling. Rinse the affected areas thoroughly with fresh water. Always consult the Poisons Information Centre or a Doctor if in doubt.
